

Medical AI Report - Brain Tumor Classification

Report ID: cb11c9ac-fad4-4176-bb37-e585851be208

Date: 2025-12-07 07:05 UTC

Prediction

Label: Meningioma Confidence: 100.00%

Description: A usually non-cancerous tumor that grows from the meninges (the protective layers covering the brain and spinal cord). It often grows slowly, and its effects depend on the tumor's size and location.

Cause: Most occur by chance. Known risk factors include past head radiation and rare genetic conditions (like neurofibromatosis type 2).

Symptoms

- Headaches
- Seizures
- Vision or hearing changes
- Weakness or numbness

Patient MRI

Reference: Normal brain (no tumor)
